       Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Score

SEQUENCE
-I-FUNCTION: ACCELERATES PROGRAMED CELL DEATH BY BINDING TO, AND ANTAGONIZING THE APOPTOSIS REPRESSOR BCL-2 OR ITS ADENOVIBUS HOMOLOG E18 19K PROTEIN. INDUCES THE RELEASE OF CYTOCHROME C, ACTIVATION OF CASPASE-3, AND THEREBY APOPTOSIS.
-I-SUBUNIT: FORMS HOMODIMERS AND HETERODIMERS TOGETHER WITH BCL-2, E1B 19K PROTEIN, BCL-1(L), MCL-1 AND A1.
-I-ALTERNATIVE PRODUCTS: THE MEMBRANE ISOFORM ALPHA AND THE THREE CYTOPLASMIC ISOFORMS, BETA, GAMMA AND DELTA ARE GENERATED BY ALTERNATIVE SPLICING.
-I-TISSUE SPECIFICITY: EXPRESSED IN A WIDE VARIETY OF TISSUES.
-I-DOMAIN: INTACT BH3 DOMAIN IS REQUIRED BY BIK, BID, BAK, BAD AND BAX FOR THEIR PRO-APOPTOTIC ACTIVITY AND FOR THEIR INTERACTION WITH ANTI-APOPTOTIC MEMBERS OF THE BCL-2 FAMILY.
                                                                                                                                                                                             Blood

TISSUE SPECIFICITY: EXPRESSED IN A WIDE VARIETY OF TIS
DOMAIN: INTACT BH3 DOMAIN IS REQUIRED BY BIK, BID, BAK
BAX FOR THEIR PRO-APOPTOTIC ACTIVITY AND FOR THEIR INT
WITH ANTI-APOPTOTIC MEMBERS OF THE BCL-2 FAMILY.
APOPTOTIC MEMBERS OF THE BCL-2 FAMILY.
SIMILARITY: CONTAINS 1 BCL-2 HOMOLOGY DOMAIN 1 (BH1).
SIMILARITY: CONTAINS 1 BCL-2 HOMOLOGY DOMAIN 2 (BH2).
SIMILARITY: CONTAINS 1 BCL-2 HOMOLOGY DOMAIN 3 (BH3).
SIMILARITY: BELONGS TO THE BCL-2 FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            SUBUNIT: FORMS HOMODIMERS AND HETERODIMERS TOGETHER WITH BCL-2, EL19 19K PROTEIN, BCL-X(L), MCL-1 AND A1.

SUBCELLULAR LOCATION: Membrane-bound.

ALTERNATIVE PRODUCTS: A 21 kDa MEMBRANE PROTEIN ALDHA AND THE TWO CYTOPLASMIC PROTEINS BETA AND GAMMA ARE GENERATED BY ALTERNATIVE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              LEADS TO LYMPHOID HYPERPLASIA AND MALE CESSATION OF SPERM PRODUCTION.

-i. FUNCTION: MAY PLAY A ROLE IN THE CONTROL OF GENE EXPRESSION.

-i. FUNCTION: MAY PLAY A ROLE IN THE CONTROL OF GENE EXPRESSION.

-i. SUBUNIT: HOMODIMER. SPLICE VARIANTS HETERODIMERIZE. INTERACTS WITH MEMBERS OF THE HP1 FAMILY OF NONHISTONE CHROMOSOMAL PROTEIN, SUCH AS HETEROCHROMATIN PROTEIN 1-ALPHA (HP1-ALPHA) AND HETEROCHROMATIN AS HETEROCHROMATIN PROTEIN 1-GAMMA).

-i. SUBCELLULAR LOCATION: NUCLEAR. FOUND IN THE NUCLEAR BODY, ALSO KNOWN AS NUCLEAR DOMAIN (DOLO), PML ONCOGENIC DOMAIN (POD), NUCLEAR DOTS. (ND) AND KR BODY. THE NUCLEAR BODY IS A NUCLEOPLASMIC STRUCTURE OF PUNCTATE SHAPE, WHICH VARIES IN SIZE AND NUMBER.
                                                                                                                                                                                                                                                                                                                                                       CHARACTERIZATION, AND COVALENT BINDING TO SUMO-1.

RT TCharacterization and primary structure of amphioxus troponin C.";

RI Eur. J. Biochem. 221:537-546(1994).

C. 1. FUNCTION: TROPONIN IS THE CENTRAL REGULATORY PROTEIN OF STRIATED C.

C. MINCLE CONTRACTION. TN CONSISTS OF THREE COMPONENTS: TN-I WHICH CONTAIN THE C.

C. IS THE INHIBITOR OF ACTOMYOSIN ATPASE, TN-T WHICH CONTAIN THE BINDING OF CALCIUM TO C.

C. TN-C ABOLISHES THE INHIBITORY ACTION OF TN ON ACTIN FILAMENTS.

C. 1- MISCELLANEOUS: THIS PROTEIN BINDS THREE CALCIUM IONS.

'Identification of an archaeal 2-hydroxy acid dehydrogenase catalyzing reactions involved in coenzyme biosynthesis in methanoarchaea.";

J. Bacteriol. 182:3688-3692(2000).

1. FUNCTION: Acts on oxaloacetate, sulfopyruvate but not on pyruvate. Has a higher selectivity for the coenzyme MADH than for NADPH.

-! CATALYTIC ACTIVITY: (S)-malate + NAD(P)(+) - oxaloacetate +
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         InterPro; IPR003767; ldh_2.
